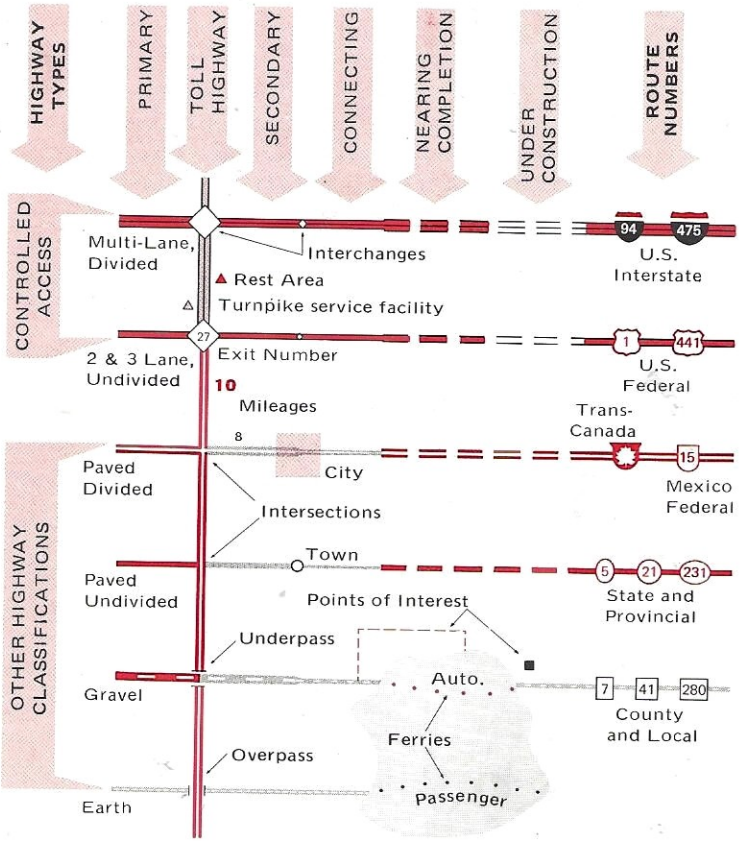
STRIP MAP LEGEND

A few moments spent in familiarizing yourself with the symbols reproduced below will reward you with a better understanding of your Triptik Routing . . . and a safer, smoother trip.



Cumulative mileages appear in the margins of strip maps and as notations on city maps.

A special feature of your routing is the marking of Detours and Road Construction

	Less than 1 mile	1 to 5 miles	5 to 10 miles	10 to 15 miles
ROAD CLOSED	●	X	XX	XXX
CONSTRUCTION— Traffic maintained		V	VV	VVV
Delay likely		V	VV	VVV
ROUGH ROAD or FAIR to POOR ROAD		I	II	III

Using your Triptik

Your AAA Triptik, a detailed, individually tailored routing is the backbone of the Triple A travel package. The clear and informative strip maps answer the needs of today's motorist on today's—and tomorrow's—highways.

Meaningful use of color and easily identified symbols key communities on the strip maps to the appropriate AAA TourBook or directory. If a town name appears in red, you know that Triple A approved overnight accommodations or dining facilities are available. A refers you to the points of interest section of a TourBook or a indicates the Camping and Trailering Directories. The lets you know there is a Triple A club waiting to serve you.

Strip maps also solve one of the major problems of traveling controlled-access highways: Where is the next gas station, restaurant or motel? Symbols inform at a glance of the availability of gas or AAA-approved lodging at interchanges, as well as the location of rest areas along the primary route. A indicates that there is a AAA-recommended restaurant near the interchange. The means that although there are no TourBook listings, one or more "family type" restaurants are located there.

An interesting feature of the strip map is the circular map on the inside. Reproduced from Triple A's state or regional maps, it depicts the relationship of your particular route to the surrounding area. By providing a broader view of the countryside and offering the opportunity to deviate easily from the marked route, it invites you to take sidetrips to nearby points of interest.

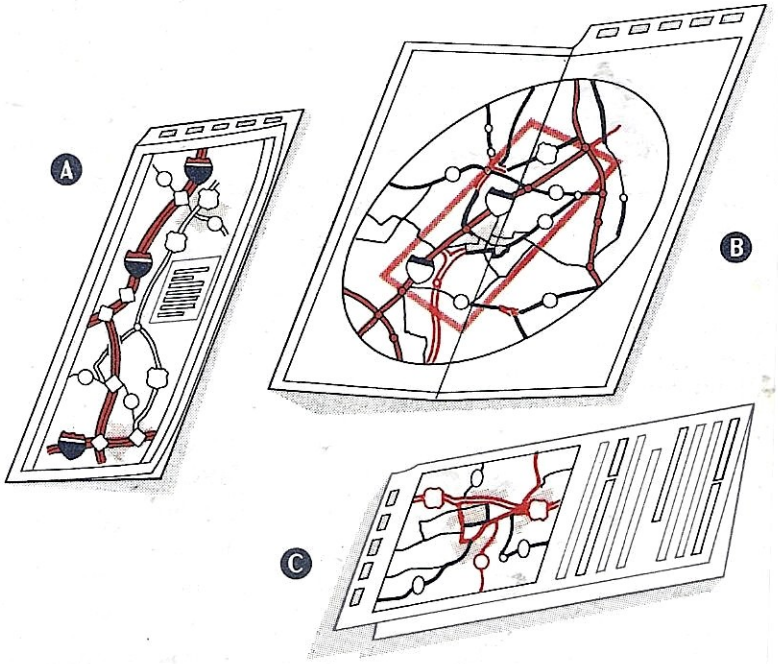
Have a safe and pleasant journey. We hope this AAA Triptik will add to the enjoyment of your trip.

76-12 Printed in U.S.A. 901

BASIC FEATURES OF AAA STRIP MAPS

There are three basic types of AAA Strip Map units: Regular, City or Area and Approach maps. Each contains four pages of information. The general features of these maps are discussed below to give you a better understanding of your Triptik and how to use it.

REGULAR STRIP MAP The front page of the unit, as shown in illustration Ⓐ , highlights a section of a through, cross-country route. The terminal cities or junctions for this section are indicated at the top of the map. These drawings show the necessary highway detail so you can follow each portion of the route with ease. An inset furnishes a brief description of the route(s) and provides figures for driving times and tolls. Cumulative mileage figures are shown along the margins. In addition, connections to other highways and, in some cases, important parallel routes are shown.



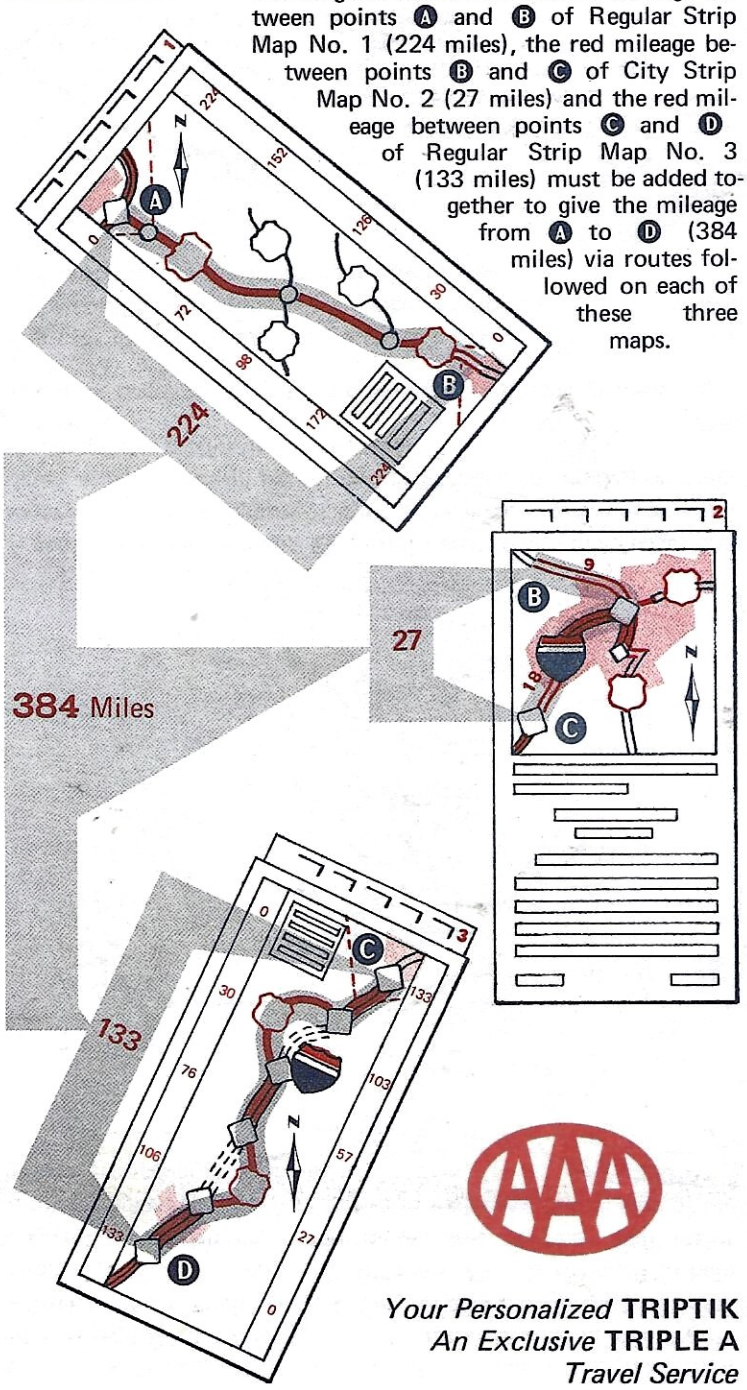
The circular centerfold area map, Ⓑ , on the second and third pages, shows the countryside in the general area surrounding the major route. These maps may be used for routing off the major highways shown on the front page strip map. As an aid to orientation, north is always at the top of the circular map. A rectangular outline on this map indicates the general area covered by the detail on the first page.

The back page usually contains outline maps of medium and smaller cities along the major route, Ⓒ . These thumbnail sketch maps show the detail for travel to or through the communities, as well as main streets within the city.

HOW TO COMPUTE YOUR MILEAGE

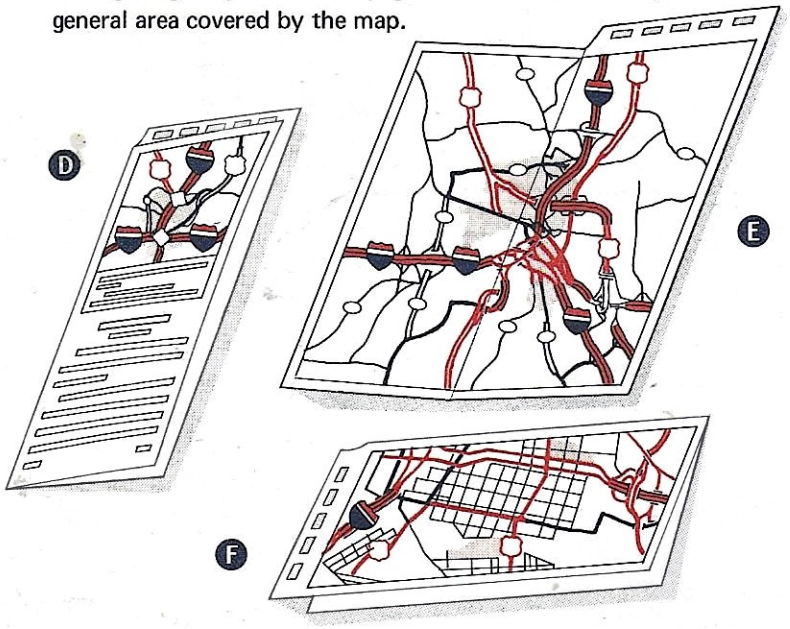
To compute overall mileage for your specific Triptik routing, combine the red cumulative mileage appearing in the margins of regular Strip Maps with the mileages shown in red on the City Maps.

The diagram shows how the red mileage between points Ⓐ and Ⓑ of Regular Strip Map No. 1 (224 miles), the red mileage between points Ⓑ and Ⓒ of City Strip Map No. 2 (27 miles) and the red mileage between points Ⓒ and Ⓓ of Regular Strip Map No. 3 (133 miles) must be added together to give the mileage from Ⓐ to Ⓓ (384 miles) via routes followed on each of these three maps.



Your Personalized **TRIPTIK**
An Exclusive **TRIPLE A**
Travel Service

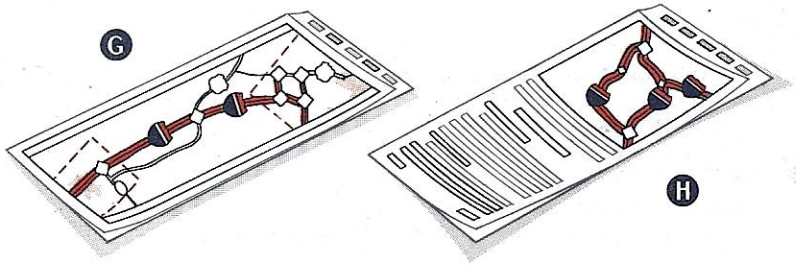
CITY or SPECIAL AREA STRIP MAP Similar in general format to the regular maps, these special units are used in the Triptik whenever the routing goes through or into a major city or recreation area. The first page "Thru" map, Ⓓ , is designed to help you travel through or to bypass the area. It shows only major through highways. The first page also includes a description of the general area covered by the map.



A centerfold vicinity map, Ⓔ , on the second and third pages presents a larger scale picture of the city or area. It provides as much detail as the scale will permit and is intended for driving on main thoroughfares within the city or area.

The back page, Ⓕ , contains downtown or special interest maps.

If a city or special area map adjoins a regular strip map, the red dashed outline at terminals of the regular strip map, Ⓖ , illustrates its relationship to the appropriate city or area map.



SPECIAL APPROACH MAP Similar in general format to the city and special area maps. The Approach unit, Ⓗ , is used in certain large metropolitan areas to show the through traveler the major direct routes through a congested area without the use of several detailed city units.

SPECIAL APPROACH MAP Similar in general format to the city and special area maps. The Approach unit, Ⓗ , is used in certain large metropolitan areas to show the through traveler the major direct routes through a congested area without the use of several detailed city units.

Trip Planning and Expenses

A TRIP well planned is a trip enjoyed. Because one of the greatest pleasures of motor travel is its freedom from confining schedules, stringent timetable planning is not suggested. Time is usually an important factor, however, and some preparation will pay dividends in enjoyment, efficient use of available hours, and sometimes in expense.

Experienced travelers allow 2½ hours for each 100 miles. This provides a reasonable allowance for driving time, meals, gasoline and rest stops. The simple formula outlined below will help in effective budgeting of vacation time.

Total days of vacation		Estimated number of travel hours per day		Total hours available	
_____	×	_____	=	_____	**A**

Approx. total mileage for trip		Hours allowable for driving, rest and lunch stops	
_____	× 2.5 ÷ 100 =	_____	**B**

A		B		Hours available for sightseeing	
_____	−	_____	=	_____	**C**

List the objectives you expect to visit and apportion the time shown in C among them.

Objectives	Hours

EXPENSES

FOR MOST PEOPLE, expense is the most important item in planning a trip. Personal habits, the amount and frequency of roadside refreshments, the purchase of souvenirs, type of car, season of the year and the region covered—all have a significant effect on expenses. For example, the overnight accommodations figure given below represents an *overall average.* Higher average rates can be expected in metropolitan areas and in vacation areas that operate seasonally. Similarly, the estimated cost of gas and oil is based on a car which travels about 13 miles on each 60¢ gallon of gas . . . plus an allowance for oil consumption.

It is easy to figure the miles per gallon for <u>your</u> car. Simply use the following formula:

Miles Driven Since Last Fill-up		Gallons of Gas Required This Fill-up		Miles Per Gallon
_____	÷	_____	=	_____

The following will help in determining the approximate cost of a proposed trip.

Overnight Accommodations

Number of Days		Average rate two persons in one room		
_____	X	$25.00	=	$_____
For one person subtract 20% of the above			–	$_____
For additional persons sharing one room add $3 each			+	$_____
				Total overnight expense
				$_____ **A**

Food, Tips and Admissions

Number of Days		Average daily food cost per person including tips		Number in party		Total food cost	
_____	X	$12.00	X	_____	=	$_____	**B**
Daily costs of admissions, amusements and miscellaneous tips						$_____	**C**
Allow $5.00 for each 100 miles to cover gas and oil						$_____	**D**
Toll charges (ferries, highways, bridges)						$_____	**E**
						Estimated cost of trip	
Total of A, B, C, D and E						$_____

Driving Tips

COURTESY and common sense are the bases of all good driving. Treat yourself and your automobile well and your vacation will be a pleasant and safe one.

Observe the posted speed limits. Pay strict attention to traffic signs and lights; they're there for a reason.

Don't pass on hills, curves, or in tight traffic. Pass only when you are sure that you have plenty of clear space ahead and that no one is trying to pass you at the same time.

If you feel fatigued, don't drive. At each gasoline stop, get out of the car and move around. Make an occasional refreshment stop. In case of real weariness, halt for a nap. To avoid fatigue and to insure getting your choice of accommodations, start early in the day and stop early in the afternoon.

Pay close attention to the road, but don't keep your eyes on it constantly. From time to time, check your car gauges and glance at the passing landscape momentarily to prevent frozen vision. Shift your driving position occasionally.

ECONOMICAL DRIVING depends on the condition of your car and how you operate it. The best guide to fuel-conscious auto maintenance is your owner's manual. Keeping the engine tuned, the hoses and wiring in good condition, the filters, points, plugs and emission control devices clean, all fluids clean and at the correct level, the wheels balanced and the tires properly inflated will coax more miles from each gallon of gasoline. And, when filling the gas tank, prevent spillage by not "topping it off."

Use a slow, easy drive to warm a cold engine. Accelerate smoothly, especially when entering a freeway or ascending a grade. Anticipate traffic signals to minimize stop-and-go driving. Where conditions permit, maintain moderate, steady speeds. Whenever possible, reduce the use of air-conditioners, heaters and other optional power equipment. Turn off the engine when parking for more than one minute.

Planning is a large part of fuel conservation. Let your AAA club help you plan an energy-efficient trip. Travel light; avoid using a car-top rack. Combine short trips, such as visits, errands and shopping.

75-1 Printed in U.S.A. 903

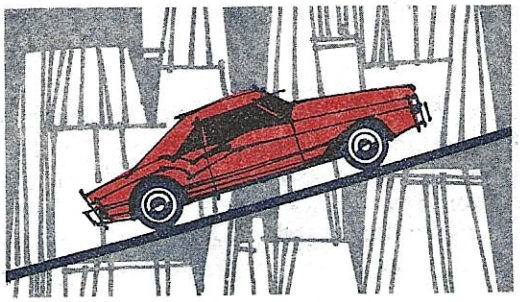
NEVER CARRY EXTRA GASOLINE, IN ANY CONTAINER. Combustion from fumes or accident is a lethal possibility.

FREEWAY DRIVING requires some adjustments in your driving habits. Because access is limited, it is important to plan exit points and service stops well in advance.

Upon entering a superhighway, use the acceleration lane to reach the approximate pace of traffic, then pick a clear space and merge into the main lanes. Once on the highway, maintain a speed consistent with traffic.

Keep a watchful eye on all other vehicles within view by glancing ahead and checking rearview mirrors. Use directional signals for lane changing and passing; always allow sufficient clearance before returning to your lane. Follow at a safe distance—at least one car length for every 10 miles of speed, more if conditions are less than optimum. Slow down gradually to force the too-close follower to pass you.

Check informational signs regularly. If you pass the exit you intended to take, continue to the next. **To slow down, stop or back up invites disaster.**



Should your car become disabled, pull completely off the roadway. Raise the hood and hang a white cloth from the driver's side of the car as a signal for help. Stay with your car and wait for the police or an emergency vehicle.

When you leave a superhighway, allow yourself time to readjust to normal driving. Remember that you will be back in the world of congestion, lower speed limits, traffic lights, and a shorter range of vision.

MOUNTAIN DRIVING, now that most major mountain roads are improved and comparatively easy to negotiate, can and should be very enjoyable. However, a few special tips are in order.

Remember that your car loses efficiency in high altitudes. Acceleration is slower and it takes longer to pass

another vehicle than you may be used to. Do **not** adjust your carburetor; you'll invite more trouble than you'll cure.

On long downgrades, do not ride your brakes. Use the compression of your motor—either second or low gear—to help slow the car. When climbing long hills, also be sure to shift into a lower gear; it will help forestall overheating, which leads to vapor lock. If a vapor lock does develop, place a damp cloth over the fuel pump for a few minutes.

Keep a full radiator. Expansion and lower boiling temperatures at high altitudes may cause loss of coolant. And, if you are hauling a trailer up long mountain grades, be considerate of those behind you by using the climbing lane if there is one or by pulling over when opportunity permits to let the faster traffic pass.

The single most common cause of accidents on mountain highways is straying onto the wrong side of the road. Stay on your side of the yellow line, especially on curves. Observe the speed limits carefully, again especially those on curves.

DESERT DRIVING is no longer subject to the hazards and discomforts once encountered. The major highways are excellent and well traveled; there are air-conditioned accommodations and well-spaced service facilities. The nature of the desert, however, calls for certain precautions. Maintain a reasonable speed and don't overwork your car in the heat. The combination of the dry climate, long stretches of roadway and high speed can cause highway hypnosis.

Keep your radio tuned to local stations for current weather information; temperatures may soar to as much as 30 to 40 degrees above the average. Temperatures of 100 degrees or over have been recorded in the spring and fall and as high as 123 in the summer months.

During the summer, plan to avoid the heat of the sun between 11 a.m. and 4 p.m. Never attempt to walk any distance in the desert.

Sandstorms and torrential rainstorms are unsuspected hazards in the desert. If you encounter such unexpected conditions, pull well off the highway and stop until it is over. However, do **not** halt in a cut or other low spot; you may find yourself in the path of a flash flood.

Check your tires in the morning, when they are cool. Carry your normal tire pressure. Although artificial heat pressure will always build up in tires during the day, the

buildup and risk of blowout are greater when tires are underinflated. If you think your tires are riding abnormally hard, stop to cool them. **Do not bleed them.**

Check the radiator and oil at each fuel stop. Unless you have a faulty radiator or hoses, it should not be necessary to add water if you drive at a sensible speed. Watch your temperature gauge, especially on long upgrades. It might be wise to carry a container of water for emergencies. Also check the water level in your battery, which will dry out more rapidly in desert conditions.

WINTER DRIVING requires a special know-how and a great deal of common sense. Well in advance of the season's first snow storm, treat your car to a winter checkup, paying special attention to the battery, defroster, windshield wipers, tires, and exhaust system.

Remember to avoid the "three O's of winter driving"—Overpowering, Oversteering, and Overbraking—any one of which is capable of producing a bad skid. If a wheel spins when trying to start out, release the accelerator and reapply pressure more gently and gradually. If the wheels persist in spinning, you may have to "rock" the car in order to get going. This is done by shifting the gears while lightly applying pressure to the gas pedal to produce a rhythmic back-and-forth motion. With a little patience and practice, rocking will usually put a car in motion even in deep snow. For the best results and greater safety, snow tires or chains should be used. Never let the air out of tires in an attempt to obtain better traction.

Once in motion, driving on ice or snow requires more than the usual attention. Be alert! Try to anticipate potentially hazardous situations. Be especially careful on hills, bridges and curves. Make certain that other drivers can see you by using your headlights on low beam even during the daytime. Signal your intentions to stop or turn much earlier than under normal conditions. Do not get into situations which might require sudden stops.

If you will be driving for some time over snowy roads, check periodically for an accumulation of ice under the fenders, a condition that can make steering difficult. Do not allow snow to clog the exhaust pipe. Always keep a window slightly open to keep you alert and dispel any danger from exhaust fumes.

Always check with the nearest AAA office for the latest weather and road conditions, then listen to your car radio for further word while driving.

Speed Limits and Accidents

THE BASIC SPEED LIMITS listed below are for typical highways. Lower limits are posted in cities, villages, school zones and on hazardous sections of roadway. Posted limits supersede the basic maximums when in conflict. Most Interstate highways or other expressways have a **minimum** speed limit, which should be obeyed as rigidly as the maximum. Unless otherwise indicated, speed limits are the same for small trailers with a gross weight of 2,000 pounds or less.

All 50 states have laws permitting motorists to turn right on red. Regulations that apply in individual states are designated by the following symbols preceding the state name:

- ● Right turn on red *unless otherwise posted.*
- ● Right turn on red *only where posted.*

Certain precautions *must* be observed before turning right on red: come to a full stop, yield to pedestrians and vehicles, turn with extreme caution.

In Case of Accident

Report immediately to your insurance company every accident in which your car is involved, even though the accident may seem trivial.

Stop.

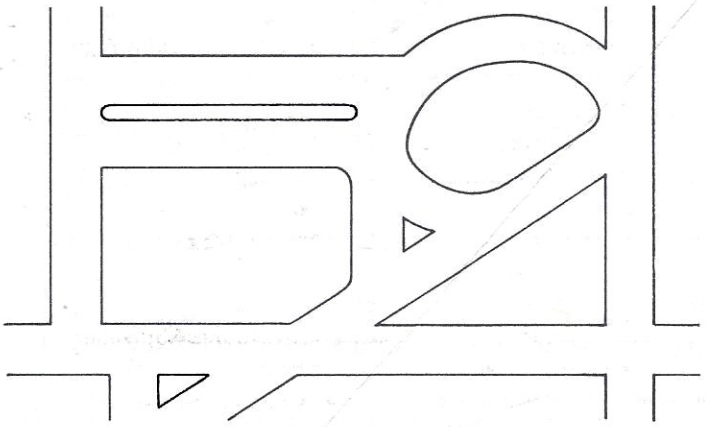
Determine the extent of personal injuries and give all possible aid. Do not attempt to move a seriously injured or unconscious person. Stop severe bleeding and keep victims warm.

Call the police as soon as possible—if someone is injured they will summon an ambulance and physician.

Keep calm. Don't argue. Don't discuss the accident or admit fault. Exchange credentials. Get names of all witnesses; give **only** to your own insurance company.

Jot down full details of accident—surroundings, position of vehicles, license numbers, speed, time, weather and road conditions. Step off distances. If you have a camera, take snapshots of the scene, of damage or tire marks and make notes for each shot.

Make diagram of accident on sketch shown below. Change sketch in any way to apply to conditions. Show positions of vehicles "before" and "after"; also indicate direction by arrows.



Important... Get the Following Information

- Name, address and driver's license number of operator **and owner** of other car:

  Address _____

- Other party's insurance company:

  _____

- Give only similar information to other driver. DON'T DISCUSS ACCIDENT.

- Report accident to:

  A. Local Police
  B. Registry of Motor Vehicles
  C. Your Insurance Company

About Accommodations

AAA FIELD REPRESENTATIVES travel throughout North America setting up a convenient network of hotels, motels, resorts, restaurants and campgrounds to satisfy the varied needs of our more than 17 million members. These highly trained men regularly check establishments to ensure that they meet AAA's requirements for recommendation.

Once an establishment receives AAA endorsement, it becomes eligible for our Official Appointment or Campground Appointment service. This permits the establishment to display the famous AAA emblem and to use it in advertising. Most approved establishments want this recognition, for which a modest annual fee is charged. In return, the operation must guarantee its rates and services to AAA members. These establishments are designated by an (AAA) in the TourBook or Camping directory.

The American Automobile Association guarantees that rates at hotels, motels, resorts and campgrounds displaying the AAA emblem will be no higher than the maximum listed in the current AAA publications. Should you be charged a rate higher than the maximum listed, submit your receipt to AAA. A refund is made when our investigation indicates unjustified overcharging.

Rates shown in AAA publications are the in-season (highest) prices. Dates preceding the rates indicate when in-season rates apply; charges are lower during other times. However, establishments may exceed the maximum rates during such special events as widely known festivals, exhibitions, race meets, athletic events, major college functions and holiday periods. Special deposit and length-of-stay requirements also may be imposed at these times. Obviously, these practices are beyond the control of AAA. In such situations, you should have a definite understanding as to the required length of stay and the rate to be paid.

Some hotels and motels have a family plan under which the rates are lower if children, within the age limit defined by the establishment, share the room with two adults. This is indicated by an **F** following the three- and four-person rates.

Ratings, which range from "Good" to "Outstanding," assist you in selecting the type of accommodation that best suits your needs and preferences. "Good" indicates that the establishment meets all AAA requirements; a higher rating reflects the degree to which a place exceeds the basic standards.

76-3 Printed in U.S.A. 908

MAKING RESERVATIONS

It is always wise to make reservations. This is particularly true in resort areas, at places where special events are being held, or during peak travel seasons in any region. Your AAA club or any affiliated club along your route can help with the necessary arrangements.

If you prefer to make your own reservations, remember that hotels and motels do not ordinarily demand a deposit with reservations, but a reservation is more likely to be held if a deposit accompanies the request. Resorts invariably require a payment. As a general rule, a reservation without deposit will be released to other guests if it is not claimed by 6 p.m., unless the establishment agrees to a later arrival time.

In requesting reservations, the following details should be given:

(1) Number of persons in party
(2) Ages of children
(3) Type of accommodations desired
(4) Date and estimated hour of arrival
(5) Length of stay
(6) Rate desired

REMEMBER: Your request does not guarantee the type of room desired, at the rate specified, unless the reservation has been confirmed.

If you find that you are unable to keep your reservation, telephone or wire the hotel or motel so the space can be released to another party. Usually, there is no difficulty in obtaining refunds for deposits on reservations made at conventional hotels or overnight motels if cancellation is given 48 hours before your scheduled arrival.

Where a deposit is involved, you should have a definite understanding as to the length of time required for cancellation notice and refund of your deposit. Most resorts have specific refund notice policies varying from as little as 24 hours to 30 or more days. The guest who fails to cancel by the prescribed time has little recourse if a refund of his deposit is refused.

For Your Protection

Patronize AAA Establishments

RESERVATION REQUESTS

It will expedite making your reservations if you provide the establishment or the AAA counselor making the reservation for you with all the necessary information. To have the data at hand, fill out the following forms before placing your reservation.

APPROACHING

From the North

Eastern segment of I-94 enters downtown Chicago. Western leg numbered I-294 circles the city until it terminates at I-80. I-90, a main highway intersects I-294 near O'Hare Int'l Airport; from this interchange, the J.F.K. Expwy continues to downtown.

From the West

The East-West Tollway becomes the Eisenhower Expressway (I-90) to downtown. I-55 enters downtown from central Illinois.

From the South and East

The main connections I-94 and I-90 enter downtown. I-80 east and west form a southern bypass.

KANKAKEE (pop. 30,944). On the Kankakee River, the city is the home of Olivet Nazarene College. In and near Kankakee may be seen old stone buildings and miles of stone fences built by pioneers and French Canadians with material quarried from the riverbed.

RANTOUL (pop. 25,562). Rapidly growing Rantoul is the home of Chanute Air Force Base, a training center which yearly graduates 28,000 technicians.

CHAMPAIGN-URBANA (pop. 89,332). Partly in Urbana and partly in Champaign is the main campus of the University of Illinois, established in 1867 as the Illinois Industrial College. Center of campus is the large, beautiful Illini Union building; the Tour Office here will arrange campus tours. Memorial Stadium, with a seating capacity of approximately 70,000, is one of the Nation's finest. Morrow Plots, the university's early agricultural experiment fields, have been in continuous cultivation since 1876. Signposts describe the experiments.

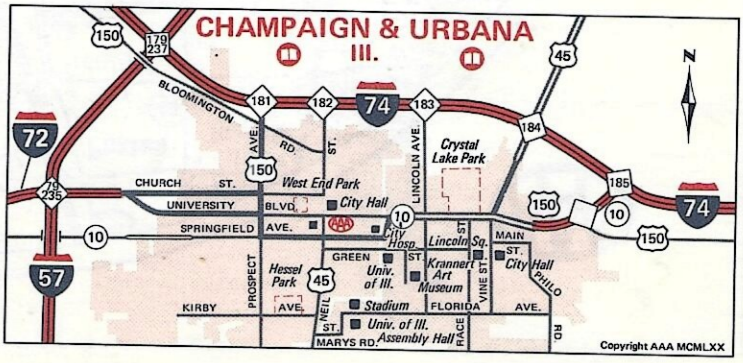
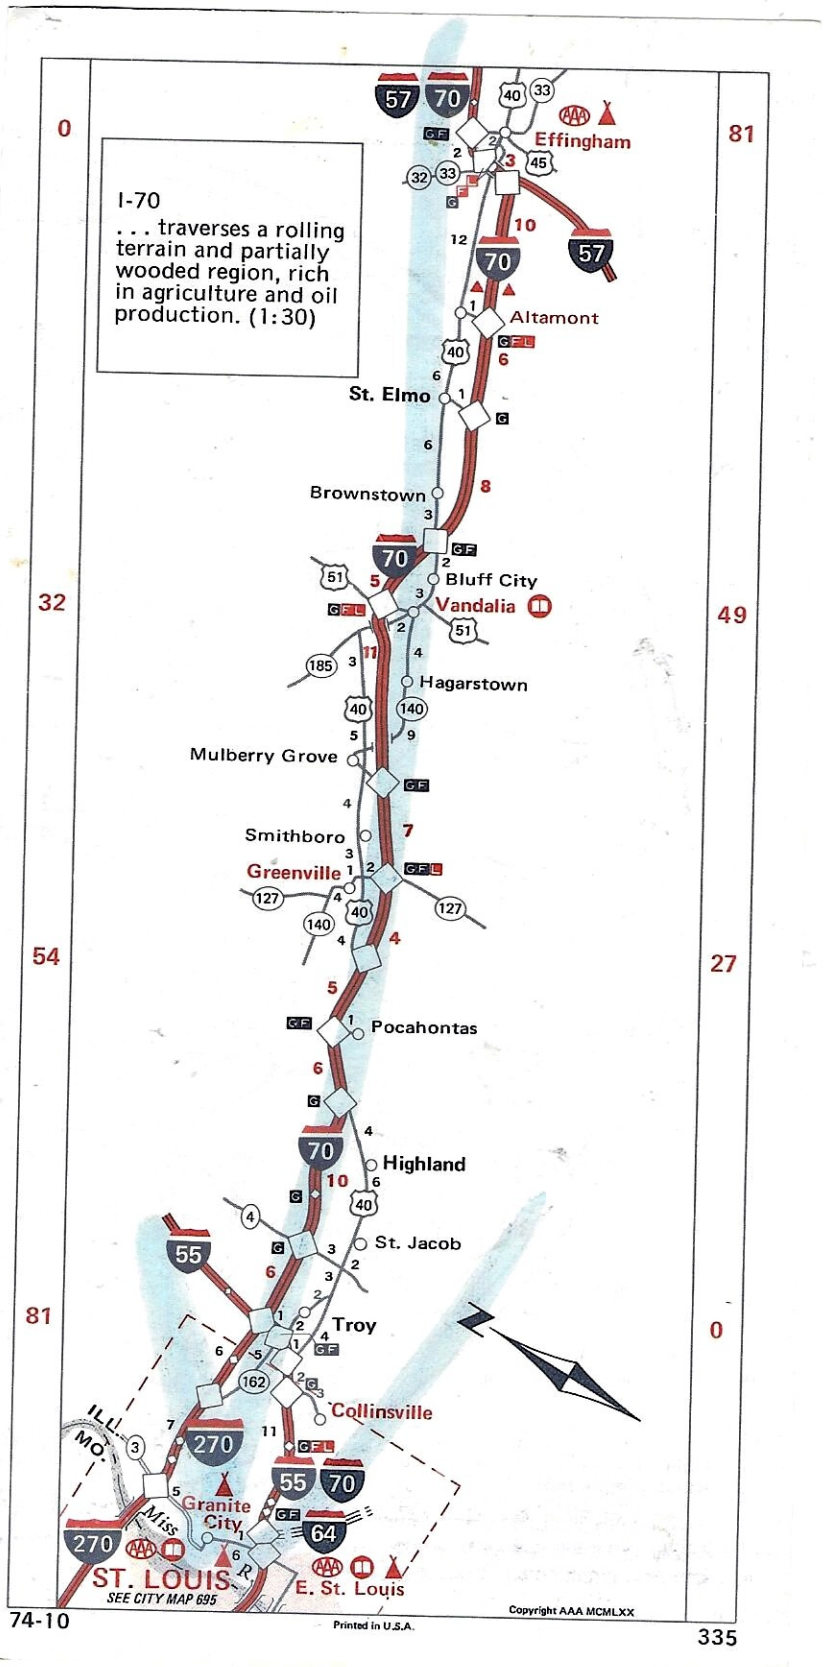
CHAMPAIGN-URBANA (pop. 89,332). Partly in Urbana and partly in Champaign is the main campus of the University of Illinois, established in 1867 as the Illinois Industrial College. Center of campus activity is the large, beautiful Illini Union building; the Tour Office here will arrange campus tours. Memorial Stadium, with a seating capacity of approximately 70,000, is one of the Nation's finest. Adjoining the campus is a 1,688-acre experimental farm.

CHARLESTON (pop. 16,421). The scene of the fourth Lincoln-Douglas debate, Charleston lies in an area rich in historical association with Abraham Lincoln. Lincoln Log Cabin State Park, 86 acres 9 miles south between State 16 and 121, contains the reconstructed, furnished cabin of Thomas and Sarah Bush Lincoln, the President's father and stepmother.





I-70
. . . traverses a rolling terrain and partially wooded region, rich in agriculture and oil production. (1:30)

VANDALIA (pop. 5,160). Vandalia Statehouse State Memorial is at 4th and Gallatin on State 140. This was the state capitol (1820-39) before the government was moved to Springfield. Abraham Lincoln served in the legislature here. The building was used as a courthouse and school. Open daily, except Jan. 1, Thanksgiving and Dec. 25. Free.

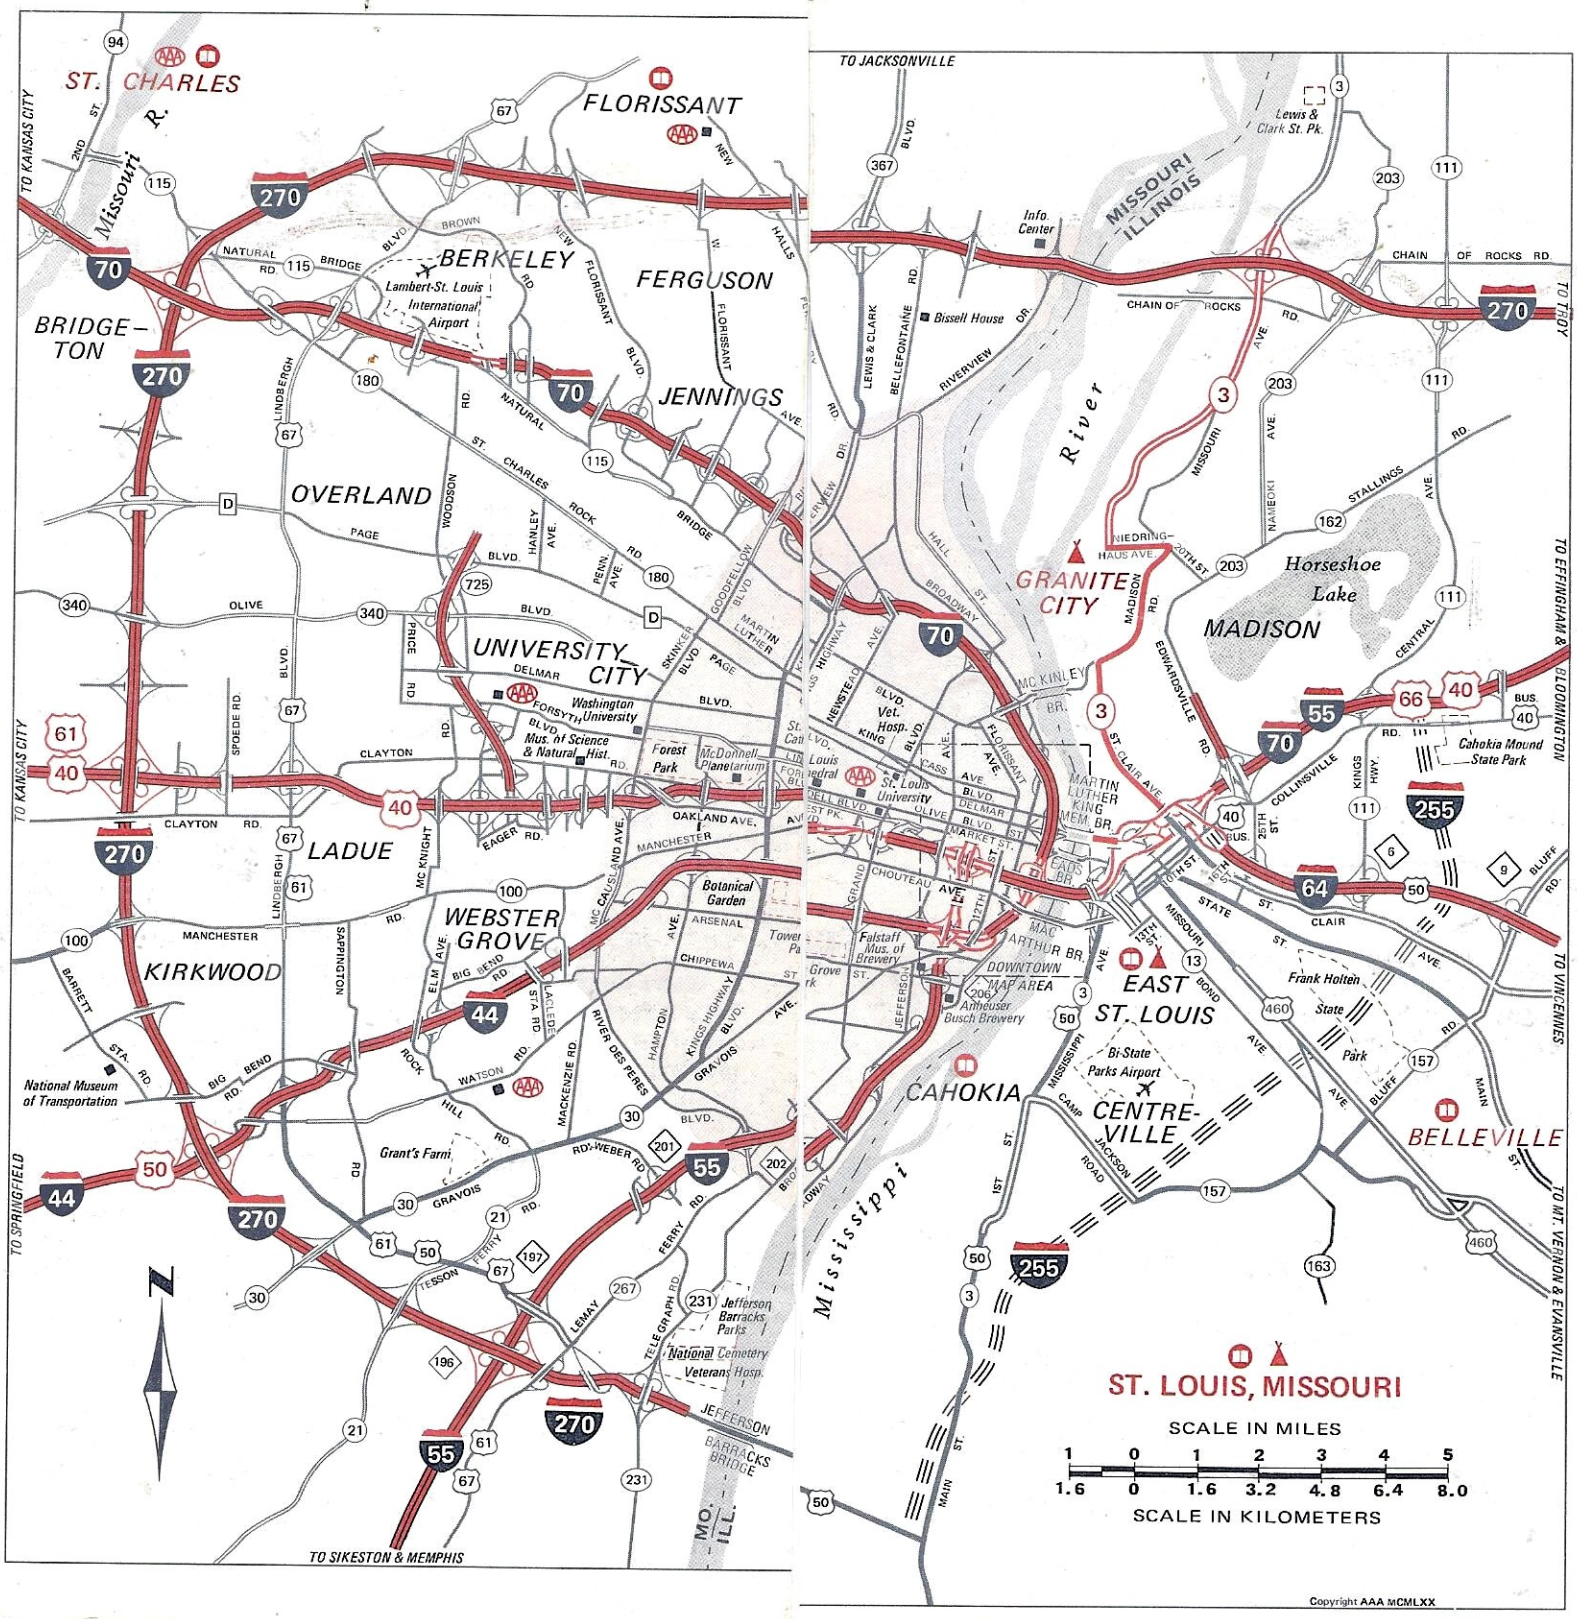
ST. LOUIS, MISSOURI

(pop. 622,236)

With a staggering urban renewal program that is not just a dream but a successful actuality, St. Louis is today what its founders planned it to be - - a vital, progressive city. Faced with the same problems crippling other cities, St. Louis's citizens organized themselves, planned, appropriated money and put into effect one of the most expensive and expansive urban renewal projects in the country. The old section of the city, adjacent to the river, is being developed as the Jefferson National Expansion Memorial.

St. Louis is one of the greatest industrial centers of the Nation and a leading world market. It is important in the production of stoves, shoes, beer, steel, cars and many more commodities; it is the largest market in the United States for wool, raw furs, lumber, drugs and a dozen other diversified products; and 13 of its enormous plants are the largest of their kind in the world.

Forest Park, bounded by Lindell, Skinker and Kingshighway Blvds. and Oakland Ave., occupies 1,400 acres adjacent to the West End residential section. McDonnell Planetarium, in Forest Park, presents an outstanding series of one-hour lectures on the wonders of the universe and astronomy. Thin walls, 3½ inches, form a hyperbola which encircles the Planetarium Star Chamber and



Copyright AAA MCMLXX

exhibit rooms on the first floor. A ramp above the chamber runs to the observation deck and penthouse.

Missouri Botanical Garden (Shaw's Garden), at Tower Grove and Shaw Ave. in south St. Louis, is one of the world's largest botanical gardens. The restored residence of Henry Shaw, who founded the garden over a hundred years ago, contains 1865-1880 antiques, furnishings, kitchen utensils and clothing.

Gateway Arch, on the grounds of the Jefferson National Expansion Memorial, commemorates St. Louis as the gateway to the West. Soaring 630 feet above the mall, it is an inverted weighted catenary curve of stainless steel. Unusual trains of five-passenger capsules carry sightseers through the legs of the structure to the observation area at the top.

STANTON Meramec Caverns, 3 miles south off I-44 and U.S. 66, has five distinct floors of unusual formation and special features. Particularly noteworthy are the stage curtain scene and Jesse James' loot rock. Open all year; fee.

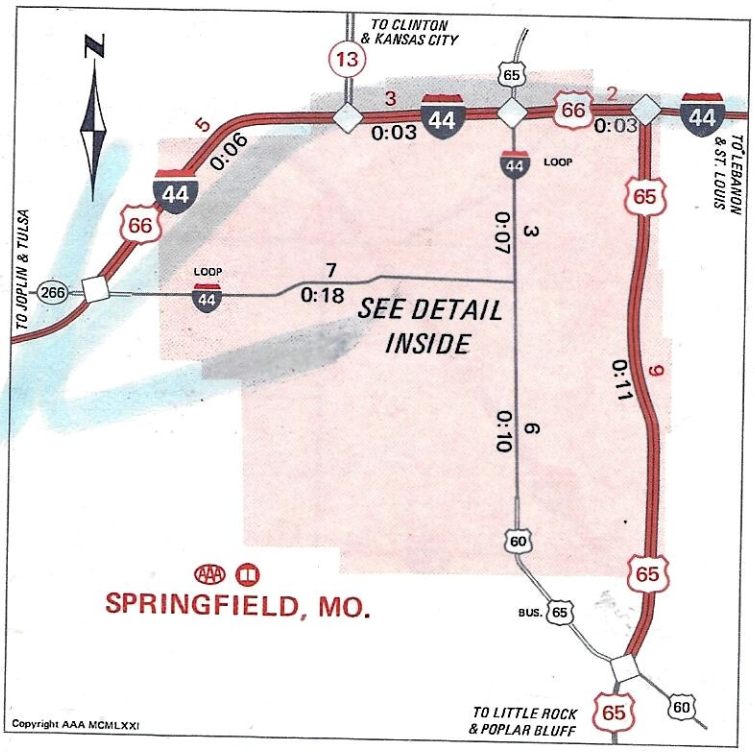
LEASBURG (pop. 218). Onondaga Cave, 7 miles off I-44 on County H, is the largest electrically lighted cave in Missouri. It contains many colorful and fantastic formations – some in delicate lacy patterns, others in massive pieces of onyx. Guided tours daily; admission charged.

ST. JAMES (pop. 2,787). Center of Missouri grape production, St. James celebrates with a 3-day Grape Festival on Labor Day weekend. Maramec Spring, 6 miles south on State 8, has a daily flow of 96,300,000 gallons. It is the center of a 1,600-acre wildlife refuge and recreational area with facilities for picnicking, trout fishing (fee) and hiking.

ROLLA (pop. 13,245). The University of Missouri-Rolla is an engineering science school of international fame. Degrees in 20 fields of engineering are offered. Headquarters for the Clark and Mark Twain National Forests, Rolla is one of the most scenic sections of the Ozarks. Excellent fishing and hunting are available.

FORT LEONARD WOOD In the heart of the Ozark mountains, Fort Leonard Wood is 28 miles southwest of Rolla on U.S. 66. It is one of the Nation's larger Army training centers providing instruction in combat and construction phases of the Corps of Engineers, as well as basic combat infantry training.

CLARK NATIONAL FOREST Divided into five sections in central and southeastern Missouri, the Clark National Forest covers approximately 802,500 acres of oak and pine-clad hills. Many highways lead into scenic hunting, fishing, camping and picnic areas throughout the forest.



For Recommended Lodging, Dining Facilities and Points of Interest See: **AAA AK/KS/OK/MO TourBook**

SPRINGFIELD, MISSOURI

(pop. 120,096)

Besides its proximity to the Ozark vacation region, Springfield is noted as a dairy center. One of the world's largest milk plants is here, as is a division of Minnesota Mining and Manufacturing. The city is also a stockyard and packing plant center. Gospel Publishing Co. is among the largest publishers of religious material in the Nation.

Springfield has not always been an energetic industrial city. Until 1850, its isolation retarded its growth. However, it was at the junction of two important roads and it had a land office, so the increasing westward migration inevitably caused the town to prosper. Throughout the Civil War its strategic position made it a military objective for both armies; "Wild Bill" Hickok served here as scout and spy for the Federal forces.

Fantastic Caverns are 2 miles north of junction with I-44 and State 13, then 3 miles west at sign. Jeep tours are available through this electrically lighted cave. The Ozark Empire District Fair is staged in Springfield in August. Fellows, McDaniel and Springfield Lakes offer fishing, boating and picnicking. Springfield Art Museum, in Phelps Grove Park, features exhibits in painting and sculpture as well as other forms of art.

CARTHAGE (pop. 11,035). The principal industry here is the quarrying and fabricating of Carthage marble. Stages of the Civil War Battle of Carthage are shown by markers beginning on the base line, 8 miles north of town and a mile west of U.S. 71.

GEORGE WASHINGTON CARVER NATIONAL MONUMENT Located 2½ miles southwest of Diamond on County V, the monument preserves the birthplace of the man who distinguished himself in the field of botany and the teaching of scientific agriculture. A Carver dwelling and the family burial plot are on the grounds.

JOPLIN (pop. 39,256). The Joplin area offers numerous spring-fed fishing streams in scenic hill country. The discovery of lead in 1849 contributed to the city's early growth. Tri-State Mineral Museum displays local minerals and scale model replicas of lead-mining methods. Open daily except Mondays; free.

GRAND LAKE Heated and air-conditioned docks at this popular lake in the Ozarks of northeastern Oklahoma pamper comfort-minded fishermen. Officially named Lake O' the Cherokees, Grand Lake covers 59,200 acres, from the damsite on the Grand River northward 66 miles to Miami.

CLAREMORE (pop. 9,084). Known as a health resort, Claremore has several artesian mineral wells with properties regarded as beneficial in the treatment of rheumatism, arthritis and skin ailments.

Oologah, birthplace of Will Rogers, is northwest. Will Rogers Memorial, one mile west on State 88, stands on the site where the famous humorist had planned to build a home. His tomb is in a small garden in front of the memorial. Open daily; free. The celebrated Will Rogers Rodeo is held in late June.

J.M. Davis Gun Collection, 5th and Lynn Riggs Blvd., is one of the largest in the world. Also of interest is Long's Historical Museum which contains an exceptional collection of antiques and historical items including frontier and Indian relics, gun and coin collection and antique automobiles.

TULSA, OKLAHOMA

(pop. 331,638)

Although no derricks are visible in Tulsa, it is known as the "Oil Capital of the World." Vast oilfields surround the city, supplying the basis for offices of nearly 850 oil companies as well as petroleum research centers, refineries and industries manufacturing oilfield equipment and supplies.

As early as 1879 a post office existed here. With the coming of the railroad in 1882, a village developed. Growth was hampered by Indian warfare, inadequate water, controversy about the railroad right of way and criminals. When the railroad terminal was moved to Sapulpa, Tulsa seemed to be inevitably doomed; but the discovery of oil saved the city. The International Petroleum Exposition is housed on permanent grounds which adjoin the 240-acre Tulsa Fair and Exposition grounds, site of the state fair which takes place early each October. Also here are headquarters of the United States Jaycees and University of Tulsa, famous for its school of petroleum engineering.

Among the city's 66 parks, covering 3,651 acres, is the Municipal Rose Garden with approximately 1,000 plants. Mohawk Park, 6 miles northeast via U.S. 169, is one of the country's largest municipally owned parks. It contains a zoo, 36-hole golf course,

OKLAHOMA CITY, OKLAHOMA

(pop. 366,481)

Capital of the state, Oklahoma City was founded in 1889 and settled almost overnight by 10,000 people when this territory was opened for settlement. Embracing 650 square miles, it is one of the largest cities in area in the United States.

The leading wholesale and distributing point for the entire state, the city ranks as one of the eight primary livestock markets in the country. Oklahoma City is noted as the location of two of the largest high gravity oilfields in the world. Over 2,000 wells, some more than a mile deep, adjoin or are within the city limits. Oil derricks stand in some of the residential districts in the community. Even the State Capitol Building is flanked by them, for it was unknowingly erected in the midst of a producing field.

National Cowboy Hall of Fame and Western Heritage Center is at 1700 N.E. 63rd St., just off U.S. 66. The center is sponsored by 17 western states to honor the men and women who made significant contributions to the development of the West and to preserve its heritage. Features of the center include "West of Yesterday," an exhibit which, through sight and sound, re-creates Indian and pioneer villages, mining and trapping scenes and a sod hut. An animated relief map of the United States shows the historic rela-

EL RENO (pop. 14,510). On the south bank of the North Canadian River, El Reno is a railroad center with car-rebuilding shops. Nearby is the Cheyenne and Arapaho Agency and School.

Fort Reno, 5 miles west on U.S. 66 and 270 then 1½ miles north, covers 9,600 acres. Established as a frontier fort in the early 1870's, it was later used as an Army Reserve Station. Fort Reno is now an Agricultural and Livestock Experiment Station under the direction of the U.S. Department of Agriculture and Oklahoma State University.

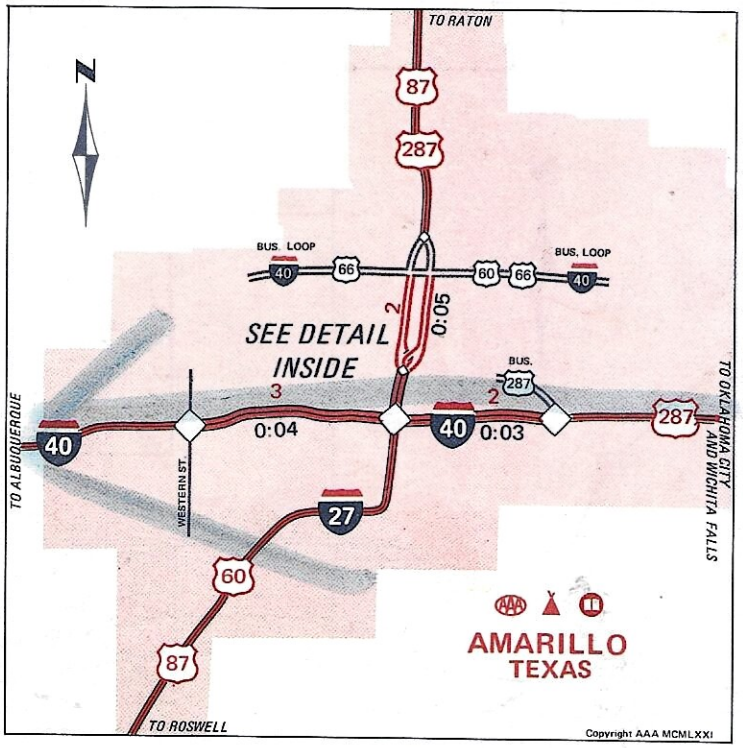
State Game Farm, one of the largest quail and pheasant hatcheries in the world, is 3 miles north off U.S. 81 at Darlington. The first Indian agency in Oklahoma was located here. An exhibit of artifacts may be seen in the office; guided tours are offered.

CLINTON (pop. 8,513). Built within a bend of the Washita River, Clinton is the shipping center of the surrounding cotton, wheat and cattle industry. Nearby is Clinton-Sherman Air Force Base. A lake, impounded by Foss Dam, provides water sports. At the northern end of the lake is the Washita National Wildlife Refuge for migratory waterfowl.

An attractive display of pioneer and Indian artifacts can be seen at the Western Trails Museum.

ELK CITY (pop. 7,323). Oil and gas production and agriculture are the principal industries in this area. Sandstone Creek, the first upstream flood control prevention program in the world, is 5 miles north. The Elk City Rodeo is held on Labor Day weekend.

Old Town Museum, 2 miles southwest on U.S. 66, consists of an authentic gingerbread ranch house with period furnishings, antiques and Indian and pioneer artifacts including an old schoolroom.



For Recommended Lodging, Dining Facilities and Points of Interest See: **AAA TEXAS TourBook**

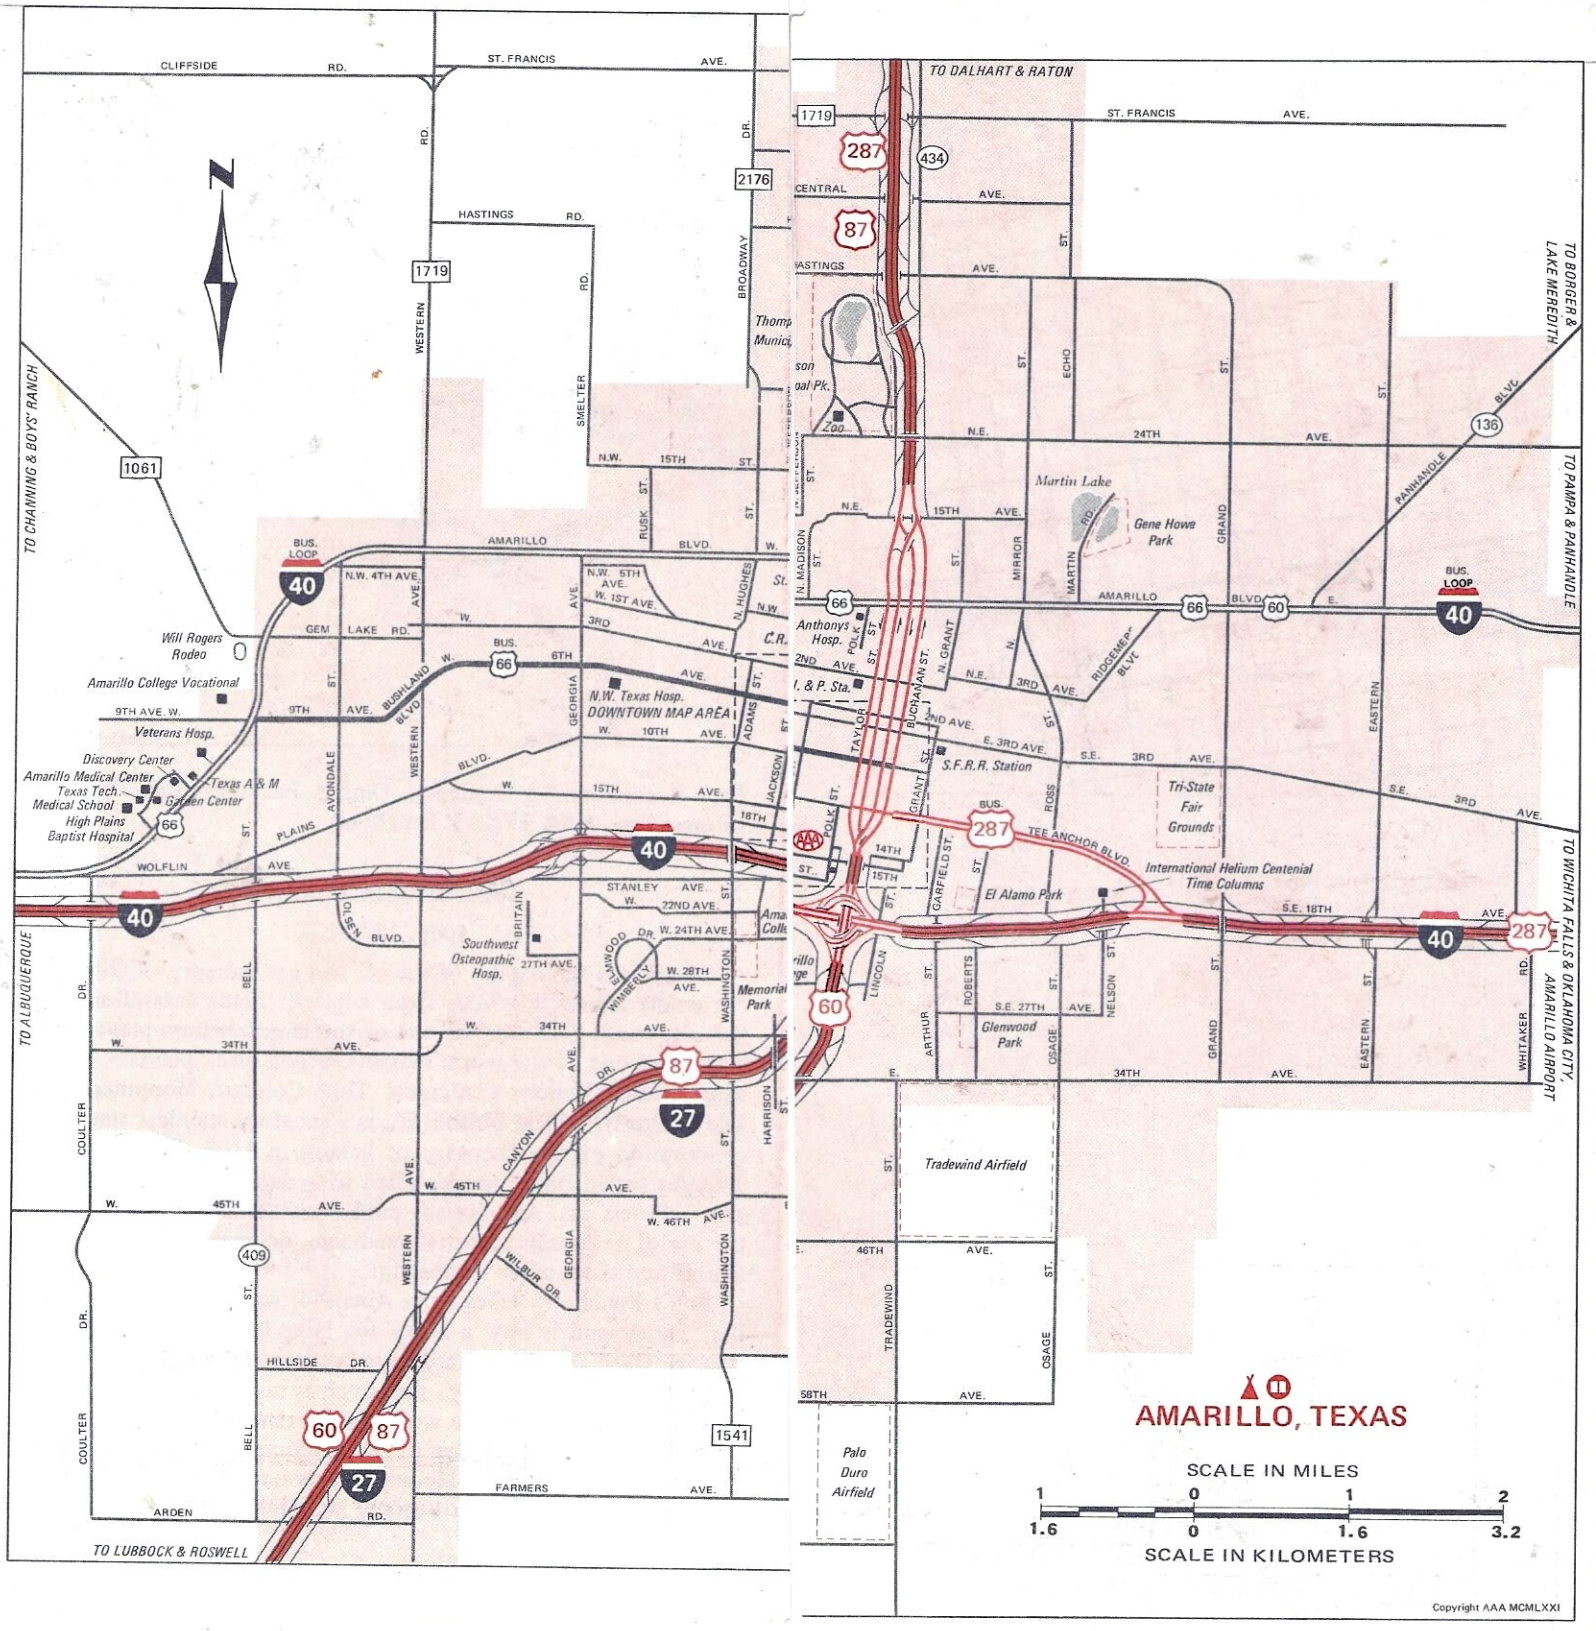
AMARILLO, TEXAS

(pop. 127,010)

Amarillo is the capital of the oil and gas industry of the Texas Panhandle region. Pipelines from adjacent fields extend as far as the east coast. The city has one of the largest helium plants in the world and one of the world's largest carbon black plants is nearby. International Helium Centennial Time Columns Monument, east side of town, I-40 at Nelson St., is a six-story stainless steel commemoration of the discovery of helium in 1868. The monument contains sealed time capsules filled with data related to this odorless, colorless gas. An adjacent public pavilion features exhibits on the use of helium in industry, medicine, defense and atmospheric, marine and outer space exploration.

Boy's Ranch, 35 miles from Amarillo, was founded in 1939 by Carl Farley and is now a home for boys of unfortunate circumstances. Once the site of Tascosa, a bustling watering center for the surrounding cattle country, the ranch is now home to more than 300 boys. Virtually all the work on the ranch is done by the boys themselves, even the erection of new buildings.

The 417-acre Amarillo Medical Center on the west edge of town is composed of eight institutions, including a veteran's hospital.



Copyright AAA MCMLXXI

Amarillo Garden Center, 5 miles west on U.S. 66, is part of the medical center. It presents floral displays of Amarillo's 10 garden clubs and features special flower shows throughout the year.

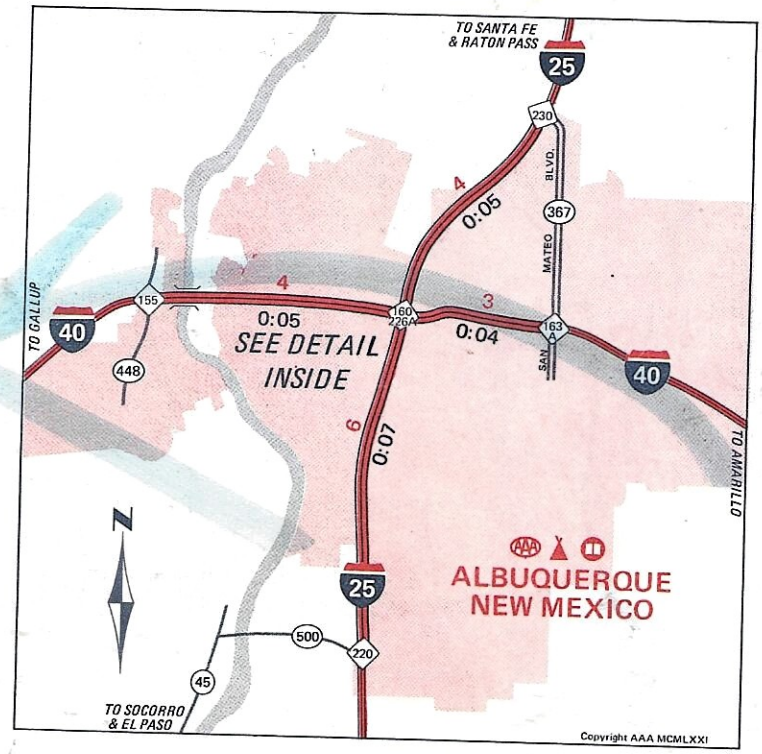
TUCUMCARI (pop. 7,189). A direct benefit of the Tucumcari Irrigation Project, over 47,500 acres in this arid region are now under cultivation. With water supplied by Conchas Reservoir 31 miles northwest, alfalfa, grain sorghum, cotton, melons and truck crops are grown. Tucumcari (TOO-cum-carry) is in Quay County, a leading cattle-raising area.

Indian and western frontier artifacts are displayed at the Tucumcari Historical Museum, two blocks north of U.S. 66 at Adams Street.



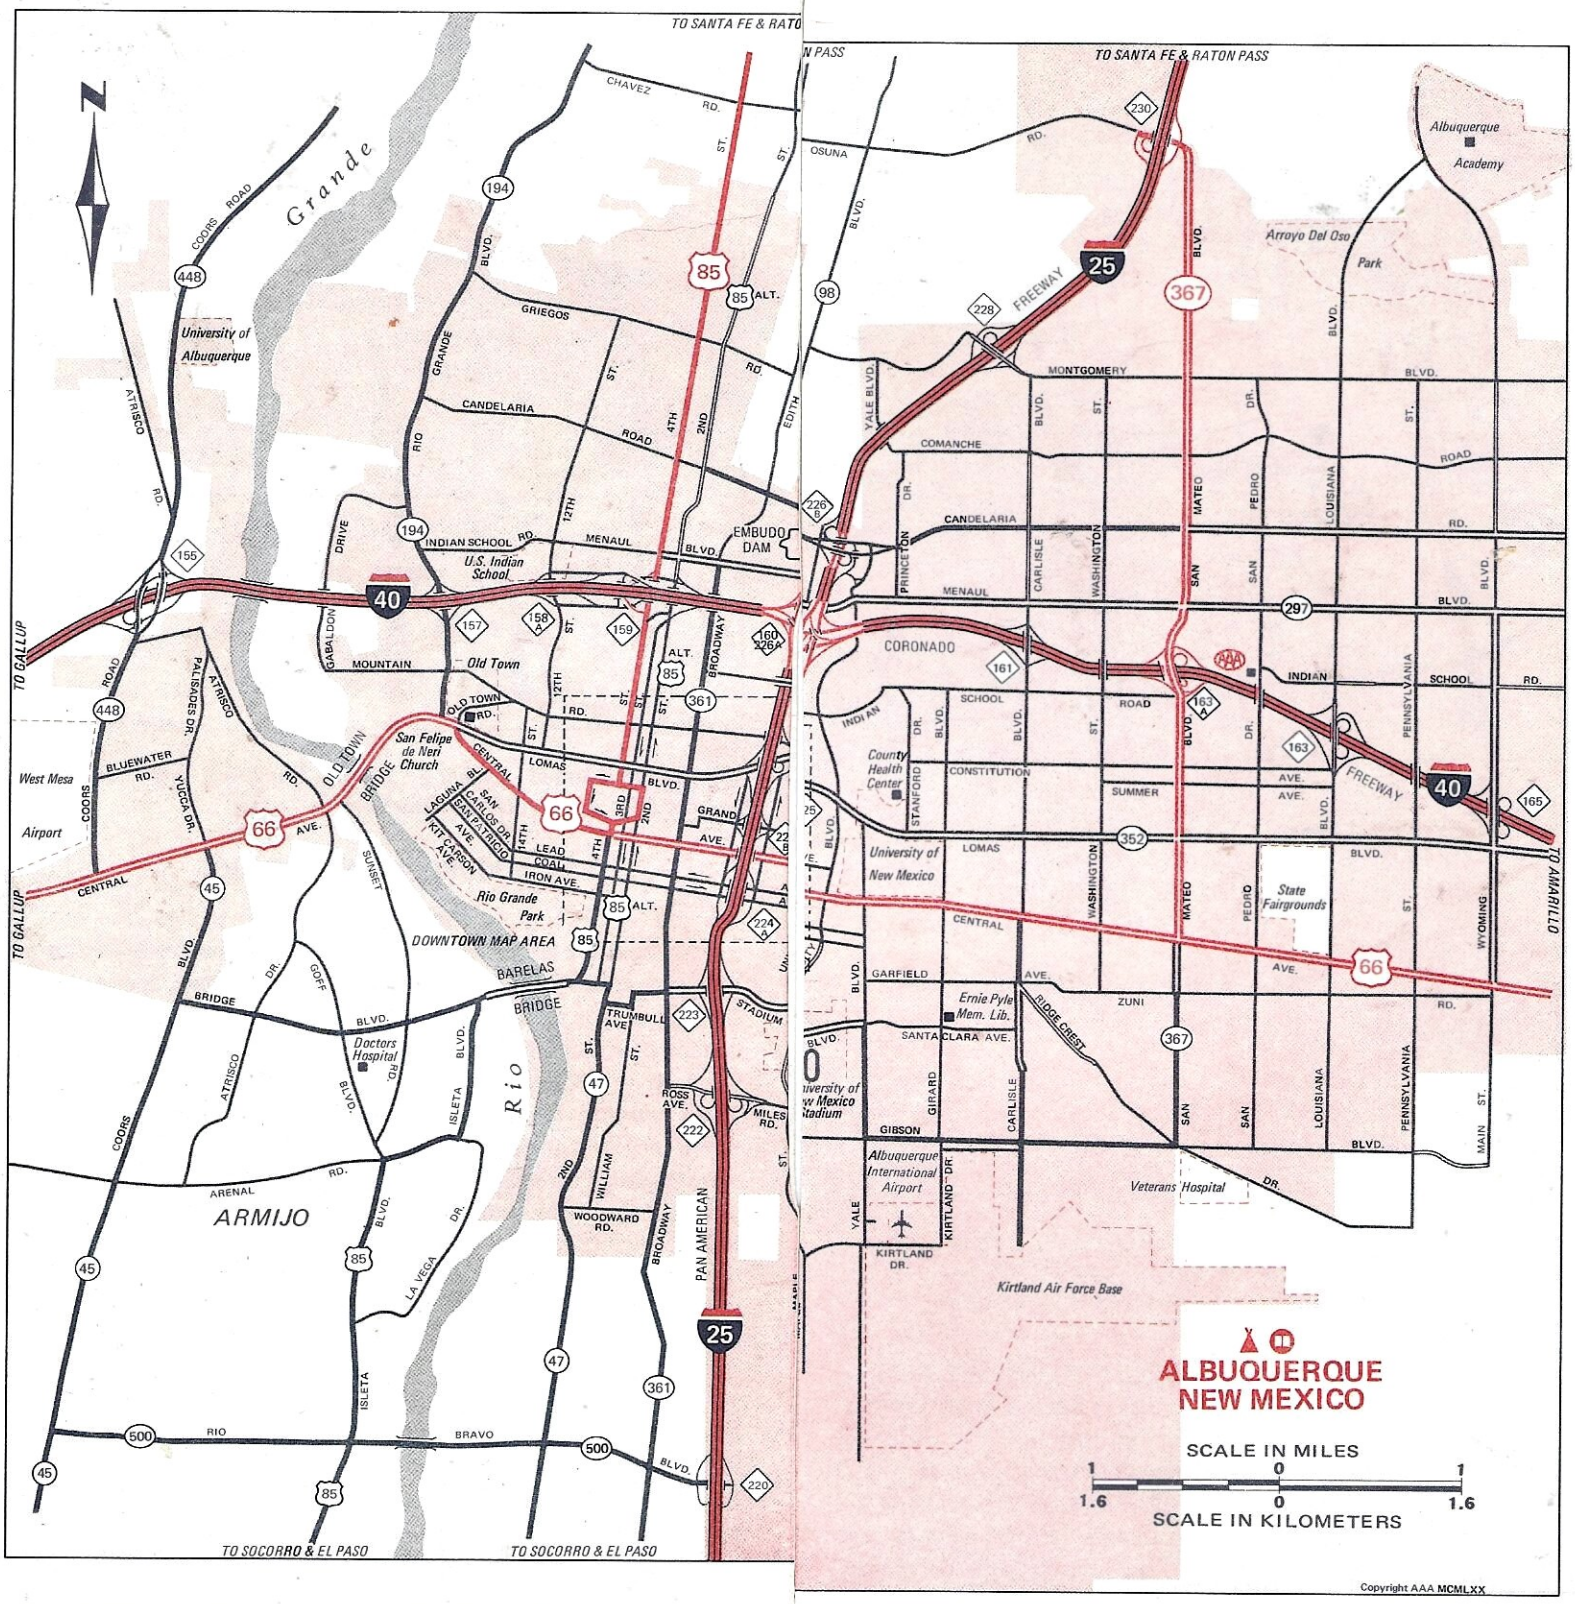
For Recommended Lodging, Dining Facilities and Points of Interest See: **AAA AZ/NM TourBook**

ALBUQUERQUE, NEW MEXICO

(pop. 243,751)

New Mexico's largest city, Albuquerque (AL-bu-ker-ke) seems to have spread like desert tumbleweed. The Old Town, founded over 250 years ago, retained its sleepy, withdrawn character when the coming of the railroad in 1880 started a brawling, lusty growth to the east. In 1950 this newer, more vigorous section annexed Old Town and Albuquerque is still growing. Activities at Kirtland Air Force Base and at Sandia Base have drawn crowds of residents to a town regarded for years as a health and tourist resort.

There are many interesting drives from Albuquerque to the Indian pueblos of Isleta, Sandia, San Felipe, Santo Domingo and others. A 65-mile drive to Jemez Springs passes a Navajo trading post, hot springs, Jemez Pueblo, an ancient ruin, many unusual rock formations and the Valle Grande volcanic crater. Accessible by an all-paved, all-weather road, Sandia Crest (10,378 ft.) offers spectacular views of Albuquerque, the Rio Grande Valley and the distant mountains. Sandia Peak (10,378), which offers similar views, ski runs and a restaurant, is accessible by tramway or chair lift. The tram ascends the west face of the mountain from a base terminal about 13 miles northeast of Albuquerque's center. The



Copyright AAA MCMLXX

1½-mile chair lift ascends the northeast face of Sandia Peak from a base terminal on State 44 near the access road to Sandia Crest.

The University of New Mexico, near downtown Albuquerque, is noted for its distinctive pueblo-type architecture. The U.S. Indian service, a large Indian school and hospital, and the Southwest Regional Headquarters of the Forest Service are in Albuquerque. It is also the headquarters for Cibola National Forest.

ACOMA Said to be the oldest continuously inhabited site in the country, Acoma was a well-established pueblo when Coronado reached New Mexico in 1540. The Sky City lies 65 miles south and west of Albuquerque by I-40 and State 23, an all-weather gravel road to the base of the mesa from which an easy footpath and a steep but passable road lead to the top. Acoma is closed for about 4 days in July for private religious ceremonies.

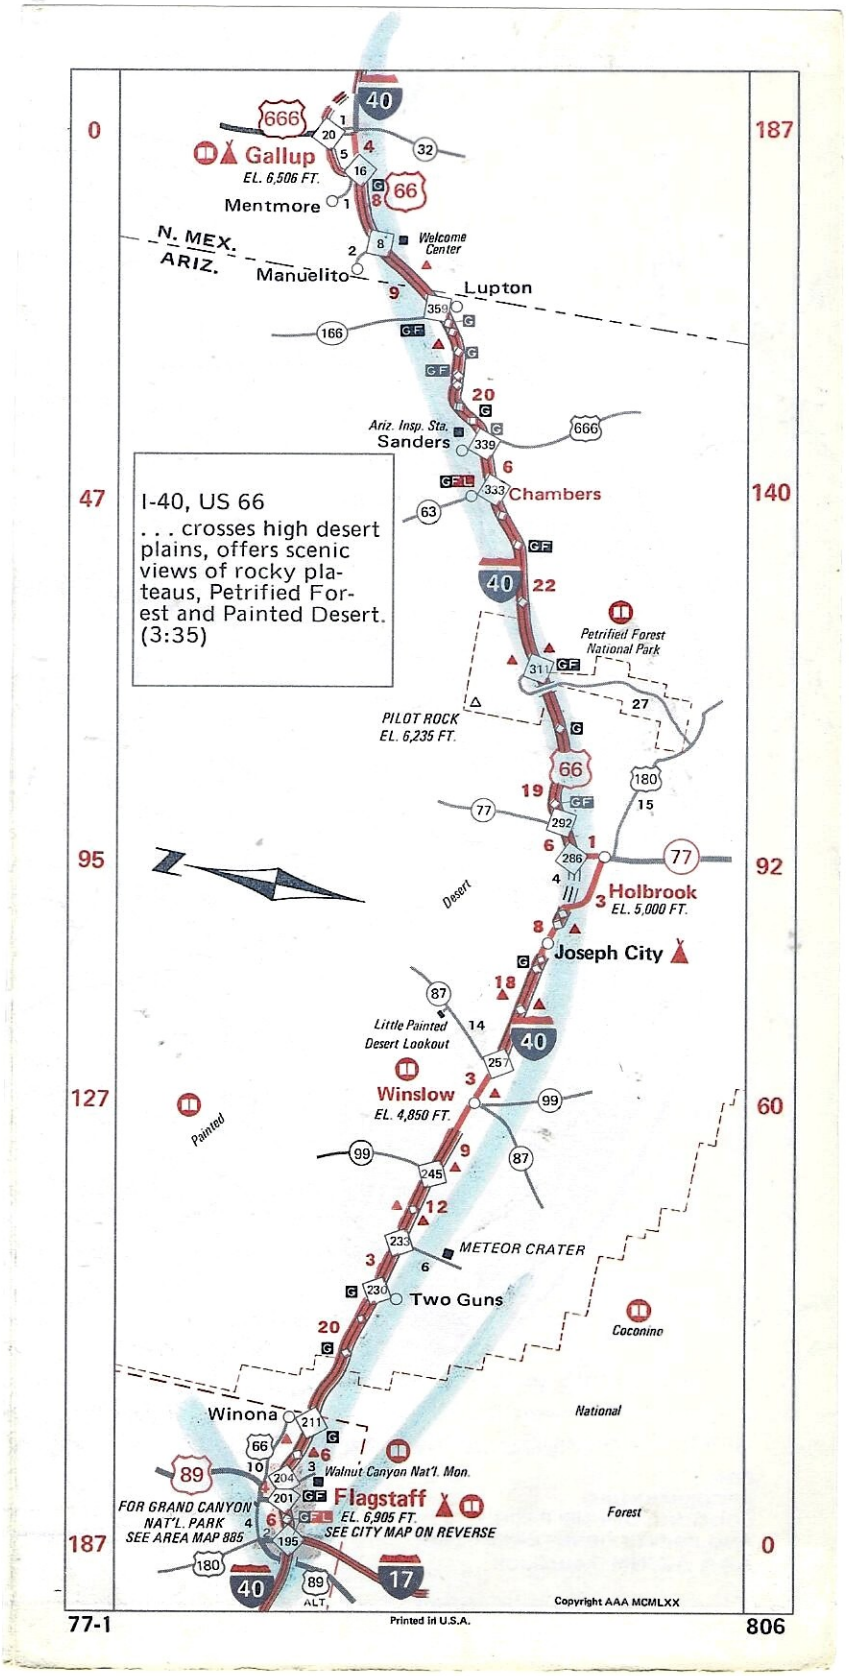
GRANTS (pop. 8,768). In 20 years Grants has developed from a farming community to a thriving uranium town. The uranium reserves in the area are among the world's largest. A large perlite mining and milling operation adds to Grant's economy.

CIBOLA NATIONAL FOREST Mountain ranges rising from the desert are scattered through the 1,700,000 acres of the Cibola (SEE-bo-la) National Forest in central and western New Mexico. Extending from Sandia Crest is a 10,000-square-mile panorama that includes a view of the Albuquerque-Santa Fe area as well as mountain ranges 200 miles distant.

There is fishing in Bluewater and McGaffey Lakes; hunting is available. Skiing is popular at Sandia Recreation and Ski Area in the Sandia Mountains. Picnic sites and campgrounds are in the forest.

GALLUP (pop. 14,596). Tribal fires surrounding Gallup each August announce the Intertribal Indian Ceremonial. For 4 days and 3 nights, members of as many as 20 different tribes perform dance rituals and chants, display their arts and handicrafts and participate in rodeos. Parades are held Friday and Saturday mornings. The program opens the second Thursday of August.

In a valley bordered by fantastic red cliffs, Gallup is a center for Southwest Indian trading. The Navajo Indian Reservation, northwest of the city, contains many well-preserved prehistoric ruins.



I-40, US 66

GALLUP (pop. 14,596). For a few days each August, several different tribes gather at Gallup for the Inter-Tribal Indian Ceremonial. The Museum of Indian Arts and Crafts features exhibits that reflect the culture of the Southwestern Indian; slide programs are presented in the summer.

PETRIFIED FOREST NATIONAL PARK Within the park is an abundance of petrified coniferous trees in brilliant and varied colors. This is one of the world's largest collections of petrified wood. Most of the trees are prone; many are in fragments. Numerous other fossil plants and many fossil bones have been discovered in the park.

WINSLOW (pop. 7,663) Meteor Crater 19 miles west and 6 miles south of I-40, was formed at least 22,000 years ago by the impact of a giant meteorite. At the crater is a museum; continuous lectures are given.

PAINTED DESERT Aptly named by Spanish explorers, the Painted Desert, a vast area of plateaus, buttes and low mesas, is almost destitute of water and vegetation, but it is remarkable for the bright colors of its sandstones, shales and clays. Painted Desert Rim Drive offers fine views; hues are best displayed in early mornings and late afternoons in summer.

COCONINO NATIONAL FOREST There are many scenic drives through Coconino National Forest. The forest area is composed mostly of slightly rolling terrain at an altitude of 7,000 feet.

WALNUT CANYON NATIONAL MONUMENT Here, under overhanging cliffs, are the remains of more than 300 prehistoric dwellings. Inhabited by the Sinagua Indians about A.D. 1120–1250, these dwellings are visible from the observation building at the canyon rim.

FLAGSTAFF (pop. 31,370). On the Coconino Plateau at the foot of the San Francisco Peaks, Flagstaff is the seat of Coconino County, second county in area in the United States and larger than Vermont, Massachusetts and Rhode Island combined. Of special interest is Lowell Observatory, one of the foremost astronomical observatories in the country. Oak Creek Canyon, considered one of Arizona's most beautiful canyons, is traversed by U.S. 89A south of Flagstaff.

significance, nothing else approaches it. Although the canyon is 217 miles long, only 105 miles are within the park. From rim to rim, the park portion varies from 4 to 18 miles in width; it is 5,700 feet deep measured from the North Rim, which averages about 1,200 feet higher than the South Rim. Altitudes on the former range from 7,450 to 9,000 feet, while the latter lies between 5,750 and 7,400 feet.

The park is open all year; however, heavy snows usually block the North Rim from late October until early May. The Visitor Center (alt. 6,950 ft.), a mile east of Grand Canyon Village, houses a museum and information center. The Tusayan Ruin and Museum and the Yavapai Museum are of special interest. Watchtower, at Desert View, overlooks the Painted Desert.

COCONINO NATIONAL FOREST There are many scenic drives through the approximately 1,999,000 acres of Coconino National Forest. The forest area is composed mostly of slightly rolling terrain at an altitude of 7,000 feet.

FLAGSTAFF (pop. 26,117). On the Coconino Plateau at the foot of the San Francisco Peaks, Flagstaff originated as a railroad town. The city is noted for its commercial, lumbering, cattle and tourist interests. Of special interest is Lowell Observatory, one of the foremost astronomical observatories in the country.

KAIBAB NATIONAL FOREST Comprising four scattered divisions of approximately 1,725,000 acres in north-central Arizona, Kaibab National Forest is situated both north and south of Grand Canyon National Park. Two mountain ranges are encompassed by the forest and elevations vary from 1,900 feet to 10,408 feet.

WILLIAMS (pop. 2,386). In Kaibab National Forest, Williams is the southern entrance to Grand Canyon National Park. The town engages in lumbering, quarrying and stockraising. White Horse, Kaibab and Cataract Lakes, all within a few miles of town, offer facilities for camping, picnicking and fishing.

PRESCOTT NATIONAL FOREST Composed of 1,250,000 acres in central Arizona, Prescott National Forest is essentially two long mountains varying in elevation from 3,000 to 8,000 feet.

GRAND CANYON CAVERNS The cave, on U.S. 66, is reached by a descent of 21 stories in an elevator. A temperature of 56 degrees is maintained throughout the year.

PEACH SPRINGS (pop. 600). This is a trading center and headquarters for the Hualapai Indian Reservation, which covers nearly a million acres between the town and the Colorado River.

LAS VEGAS (pop. 125,787). From a sleepy town in 1905, Las Vegas has grown into the entertainment and gambling center of the world. The lure of easy money draws 15 million visitors annually to its casinos. New luxurious hotels on the city's famous "Strip" have some of the best entertainers in America performing as an added attraction.

BOULDER CITY (pop. 5,223). Hoover Dam, 726 feet high, is one of the highest dams ever constructed and one of the greatest engineering projects in the world. Measured by volume, Lake Mead, impounded by the dam, is one of the largest artificial lakes in the Western Hemisphere.

WICKENBURG (pop. 2,698). Once a pioneer gold-mining town, Wickenburg is now a popular winter resort. Hunting, fishing, picnicking and camping are available in the Prescott and Tonto National Forests.

KINGMAN (pop. 7,312). This is a shipping, shopping and recreational center for a large area of northwestern Arizona. The Mohave County Chamber of Commerce Museum is open weekdays; free. Open pit copper mining and the relative proximity to Lakes Mead, Mohave and Havasu are important to Kingman.

Hualapai Mountain Park is 14 miles southeast in the Hualapai Mountains, ranging from 6,000 to 8,400 feet. It is a heavily timbered area with a lodge and cabins; picnicking and camping.

SAN BERNARDINO, CALIFORNIA

(pop. 104,251)

San Bernardino, settled in 1810, has become a noted commercial and cultural center. At the base of the San Bernardino Mountains, it serves as headquarters for the San Bernardino National Forest. In the spring it is the scene of the National Orange Show. Also in town are the Santa Fe Railway West Coast Repair Shops. Nearby is the Norton Air Force Base.

Rim of the World Drive, State 18, is a scenic mountain road to Lake Arrowhead, Big Bear Lake and other resort areas. The 50-mile road winds along the mountainside and through small valleys at elevations from 5,000 to 7,200 feet, offering many panoramic views. One of the most spectacular is from Lakeview Point (7,203 ft.) where the road ahead may be seen winding along the cliffs around the head of Bear Canyon, with a glimpse of Big Bear Lake in the distance. Visitors may use either State 38 or State 18 around the lake and continue past Baldwin Lake and over the Johnson and Cushenbury Grades to Lucerne Valley, Apple Valley and to the community of Victorville.

San Bernardino National Forest encompasses the highest mountains in southern California, including San Gorgonio Mountain,

ONTARIO (pop. 64,118). To the east of Ontario is the world's largest vineyard, which covers more than 6,000 acres. The C.C. Graber Co. offers tours which show the grading, curing and canning of olives. Ontario Motor Speedway, north of I-10 at Haven Ave., is one of the world's most modern raceways. The California 500, the Supernational Drag Races and the Grand National Stock Car Race are held here annually.

CLAREMONT (pop. 23,464). Claremont is best known as a college community. The Claremont College – Pomona College, Scripps College for Women, Claremont Men's College, Claremont Graduate School and University Center, Harvey Mudd College and Pitzer College for Women – are here, as is the Southern California School of Theology. It is said that this attractive community has more street trees than citizens.

POMONA (pop. 87,384). The Los Angeles County Fair, held from mid-September to early October, attracts over a million visitors to Pomona. It is one of the largest county fairs in the Nation.

Arabian Horse Shows are presented at the Kellogg Campus, California State Polytechnic College, where purebred Arabian horses are bred and trained. Exhibitions are usually held on Sundays during October and November and from January through May, except Easter.

APPROACHING

From the North

I-5 and State 99, which merge a few miles south of Bakersfield, are the major direct routes from the north, following the Golden State Freeway into central Los Angeles. Also providing controlled-access freeway driving from the north is U.S. 101, which approaches Los Angeles via Santa Barbara and Ventura. More scenic is State 1, which parallels the coast; while this route is slower and more dangerous when fog sets in or rain increases the possibility of slides, it offers outstanding views of California's coastline.

From the East

Major highways from the east are I-15 through Las Vegas, I-40 from Arizona through Needles and I-10 through Blythe and Indio. I-10 follows the San Bernardino Freeway into downtown Los Angeles; then, as the Santa Monica Freeway, it runs to Santa Monica, where it ends.

From the South

The main route into Los Angeles from San Diego and points south is I-5, a controlled-access freeway. It runs along or near the coast to San Juan Capistrano, where it turns inland and passes through Anaheim before following the Santa Ana Freeway into central Los Angeles.

From the North and South

I-405 the San Diego Freeway provides a good alternate, through route which avoids the downtown area.

YOUR AAA CLUB

YOUR club, a component of the American Automobile Association, is one of more than 750 clubs and branches united under the AAA emblem to render service to members.

NO EFFORT or expense is spared to assure the dependability of AAA travel service and to obtain authentic information for members. An expression of this aim is the intensive activity of the AAA field representatives who cover all principal highways annually and travel from Alaska to Mexico inspecting and reporting on accommodations and tourist attractions.

ONLY those places which have been inspected and approved by these men are recommended in AAA travel publications. From the 70,000 hotels, motels and inns located along our highways, the AAA representatives find less than 20 percent acceptable for recommendation to members.

WHETHER you go by highway, rail, air or water, consult your motor club. Saving you time and trouble, your club will plan the best itinerary and obtain transportation and room reservations.

IN ADDITION to the familiar domestic motoring services, your club will ship your car abroad or arrange for the hire or purchase of one in Europe. Through its overseas offices and world-wide affiliations your club can assure you personalized service in 60 foreign countries.

AAA

625

AMERICAN AUTOMOBILE ASSOCIATION

Let your Chicago Motor Club handle your travel requirements. Whether you travel around the corner or around the world your Motor Club has the facilities and expert staff to help you plan a most enjoyable trip.

Your Club's Touring Service can provide you with the finest highway maps and travel guides for touring the highways and by-ways of North America.

Your Club's World Travel Service can provide you with:

- Air, bus and rail tickets - foreign and domestic.
- Steamship and cruise reservations.
- Independent and escorted tours to Europe - Hawaii - Japan and the Orient - South America - Mexico - Alaska - around the world.
- Arrangement of automobile rental - foreign and domestic.
- Assistance in obtaining passports, visas and all other travel documents.
- Foreign driving licenses and other international driving documents.
- Assistance in the purchase of foreign automobiles for delivery abroad.
- Travelers Checks.
- Accident and baggage insurance for all trips, available through all Club offices.
